APPLICATION NOTE

CDN-ME-1902 – Multi-Element

SUMMARY

The application note summarizes the digestion of CDN-ME-1902, a multi-element Reference Material using ColdBlock™ Digestion Pro Series Technology.

Instrument:	ColdBlock CBM sample digester, chiller, HF compatible liners, ICP-MS & ICP-OES
Published:	January 2023
Digestion Time:	30 Minutes
Acid Used:	Reverse Aqua Regia, HF & H_3BO_3
Average ColdBlock Recovery vs. CRM:	■ 102% Copper ■ 104% Lead ■ 103% Zinc

METHODOLOGY

1. Chiller temperature was set to -5°C
2. 0.25g of each sample was weighed and placed into a ColdBlock™ Digestion vessel
3. 20 mL of reverse Aqua Regia + 3 mL HF was added
4. Sample was digested at 80% power for 20 minutes
5. 20mL of 4%$_{v/v}$ Boric acid was added
6. Samples were digested again at 80% power for 10 minutes
7. Samples were cooled and bulked to 50mL using 2% HNO_3 + 0.5% $HCl_{v/v}$

DISCUSSION

- The addition of Boric acid will help re-solubilize any insoluble fluorides and will help neutralize any remaining HF in solution
- To improve silver recoveries, bulk up with >20% $HCl_{v/v}$
- If the Sulfide content of your sample is > 10 wt.% – reverse the ratios of Aqua Regia and use 1:3, HCl:HNO_3 – always add the Nitric acid first (reddish brown NO_2 fumes might form)

Standard CDN-ME-1902 was prepared by combining miscellaneous ores.
